Ottawa Takes Steps To Help Canadian Farmer

Say No Fadiist Economics Is Involved in Proposition

The farm debt adjustment legislation, which went a considerable way on its journey through the House last Monday, completes the new deal which the Bennett government is extending to the Canadian agriculturist at the present session. The other legislative feature of the new deal was the marketing act over which so much controversy was raised.

With this program of legislation enacted, the government will have extended to the farmer the means of writing down his indebtedness to a figure within his capacity to support.

It will also have undertaken to furnish him with working capital to commence his operations anew. Finally, it will have accepted the obligation of agreeing to assist him upon request in the marketing of his produce.

No equally comprehensive program of agricultural assistance is said to have been enacted by any other government in the world, and the point in connection with it which the administration stresses is that it is all orthodox. No faddist economics it is contended, are involved in it and there is no interference beyond supervision and regulation with established marketing agencies.

Roman Race Will be Attraction at Stampede

Assured of Several Entries For Dominon Day Here

Several entries for the Roman Race are assured for the Stampede here on Dominion Day July 2nd. This race has always been one of the main features of the Stampede and it looks as though this year's will be more exciting than ever.

Entries are also coming in for the saddle horse relay race. We are also assured of a good program of athletic events which will be run off between the horse races, bucking contests, steer riding and calf roping.

On the whole it looks like a real big day this year.

OXFORD GROUP MEETING

Members of the Oxford Group returning from the Banff House Party, under the leadership of Dr. A. C. Farrell of Edmonton and George Majoribanks of Edinburgh, Scotland, held a public meeting in Fifth Avenue Church Medicine Hat last night.

Dr. Gershaw, introduced the party and spoke of the splendid work that is being done by the Group.

Among the speakers were Rev. J. C. Wright, Akron Ohio, Mrs. Lowery, Miss Tompson and Mr. Hallam all of Saskatoon, G. Majoribanks of Edinburgh and Victor Kitchen, New York advertising man and author of "I was a Pagan."

Several from Redcliff attended the meeting.

Softball Girls Win Game From New Club

The Local Girls Put Up An Air Tight Game

It would be almost impossible to see a nicer bit of team work than our girls put up last Monday evening when they defeated the New Club 7 to 1 in the softball league game here. So far as the home girls are concerned they staged an air tight game which was almost errorless.

Each one was on her toes from the drop of the hat to the finish. Their fielding and base running could hardly be improved upon, and the battery had the visitors baffeled throughout the game.

An unfortunate accident occurred about the middle of the game when a Redcliff base runner collided with the first base visitor. Both got a bad jar and the visitor was later forced to retire from the game.

The visitors got their only run in the first innings, but they were no quitters. They put up a game fight to the finish.

New Club	1	0	0	0	0	0	.....	1

Teco	4	0	0	000

Local Girls to Play Daddies Again Friday

Proceeds To Go To Getting The Girls New Equipment

Not satisfied with the result of their game with the 'Daddies' last Friday, the local softball girls have challenged the champions to another game on Friday evening of this week. The girls will bring out their heavy artillery for the occason and the "Daddies" may find it necessary to make a few changes in their line up as next Friday is the childrens' night out at some of the old players' homes and the daddies have to stay home to mind the maid. However a good game is assured. As the proceeds will be used to buy new equipment for the Girls' Club it is hoped there will be a good attendance at the game and that the collection will be a substantial one.

Amateur Night Was Called Off

Not Enough Entries To Make Up The Program

As there were not enough entries to put on a sufficient program, the Amateur Night billed for last Monday evening in the Little Theatre, was called off.

This is too bad as a number of good items were assured and it would have been a good opportunity to introduce some new talent to a Redcliff audience.

It is the intention to try to work up a similar night early in the fall. Possible entrants should start now and get something worked up.

* * *

Dr Wray was a week end visitor in Calgary last week.

The Week at Ottawa

The High Court of Parliament might be described as a city within a city or, more accurately as an isolated corporation within a province. It has been ruled that so far as Ontario Liquor Laws are concerned, that the Parliament buildings are extra territorial. Very little advantage is ever taken of that as the drinking of alcholic liquor is rare indeed. Last week an attempt was made to serve papers on the leader of a political party in Ostario who is also a member of the parliament. It was found impossible to do this Ontario police have no authority to enter these sacred precincts.

The buildings are placed high up on a hill within sound of the splashing of the Ottawa river as its waters dash over the Chaudiere Falls. Looking beyond to the the north the distant snow capped tops of the Laurentian Hills can be seen. The large centre block faces the south and overlooks the city of Ottawa where the pinch of the depression has hardly been felt. There are 12,000 government employees and although the salaries have been reduced by 10 % for the last two years, yet their cheques come regularly, can be cashed anywhere and at present prices buy about 25 % more.

While the session is on there is great activity within the buildings. Early in the morning an army of charwomen go over every foot of space cleaning and dusting. They leave at 8 a. m and before nine the stenographers hurry into the buildings. The stenographers are called to the members' offices and each one takes dictation for usually two or three members. When this is done they return to a large room where hundreds of typewriters are kept busy all day long. The internal management is, to a great extent, under the Speaker. He delegates the work to the Sargeant-at-Arms who at present is Col. Gregg, V. C. There are many police officers both inside and outside the buildings. Those outside the building have a hard time especially in the long cold winter nights when they must watch every approach and pace in front of the building. Those inside must also never sit down while on duty and except when locked up at night the Mace is constantly watched by police officers. Within the Centre block there is a Restaurant where regular meals are served for 50c and 75c each and on the fifth floor there is a Cafeteria where light snacks may be purchased by those who are inclined to be on a diet, which includes many of the members are. Spartans to the degree that one of their meals consists of a cup of tea and a sandwich.

The buildings have a separate telephone system a central heating plant, barber shops, Post Office, stationery department and this year, for the first time a private radio has been installed by one of the members.

Both the Senate and the House of Commons have a bar of Justice at which any transgressor is tried. If convicted he may be sentenced to solitary confinment in the Tower. There are some very old rules still in force. One is that a prisoner must pay $4.00 before he can be released, whether guilty or innocent. Another is that he may order any food he cares for and when the House prorogues he is apparently free to go also

Sincerely
F.W. Gershaw.

Daddies Take Girls Across Their Knees In Soft Ball Game

Spanked Them to the Tune of Fifteen to Eleven

Married men softballers in town are now feeling quite cocky as a result of winning their game against the Girls' Club last Friday evening.

The agility of the old codgers and the pep they put into the play was an eye-opener to the girls and an eye-closer to at least one of the married gang.

Although the "Daddies" had had very little practice on the diamond this season their daily practice with the rolling pin floor mop and hoe, showed they were in good shape for the game They won out easily with the score 15 to 11 at the finish.

The girls appeared to be mesmerized by the streamlines exhibited by the Daddies in their playing togs.

A slight accident happened in the first half of the third frame when Daddy Stone was trying to make a Jerusalem slide into second base. When just inside the Wailing Wall he was struck in the eye by a She knee, breaking his glasses, puncturing his face and sending him to the hospital for repairs.

Mounties Capture Two Bos off Morning Train

There was a flurry of excitement at the C. P. R. station here this morning when the passenger train from the west pulled in about 8.30.

Two mounties were on hand when the train arrived and when it stopped two blind baggage passengers jumped off on the north side. They took to the prairie, followed closely by the mounties and refused to stop when commanded to do so. A volley from the mounties, however, slackened their speed and they were soon overtaken and herded into the police car.

Farmers Hold Meeting At Harvest Vale School

Pass Resolutions Concerning Tilley East Area

A meeting of farmers of the Bowell, Harvest Vale and Box Springs districts was held in the Harvest Vale school a week ago last Saturday. The meeting was called for the purpose of discussing matters in connection with the Tilley East Area district. R. S. Rose acted as chairman of the meeting and R. S. Further as secretary.

A resolution was passed petitioning the Tilley East Area Board to discontinue the general annual round up, and instead, making individual lease holders responsible for the rounding up of their own stock, and that range riders take care of strays

A motion was also passed requesting the Board to supply gopher poison for the district on a fifty-fifty basis. It was pointed out that gophers were making great headway and were doing considerable damage to the crops, and that under present conditions farmers were unable to undertake the full expense of getting the gophers under control in such a large territory.

A motion asking for the dispensing with the local advisory committee, was defeated.

The meeting passed a resolution asking the Board to have a drift fence built north of Bowell as outlined on an official map Volunteers were called for to assist in building the fence and ten offered their services.

Messrs. G. Dickson, H. Dacre and O. Day were elected as members of the local committee.

Town Council Has Quiet Session Monday

No New Business Brought Up For Discussion

Town Council met in regular session last Monday evening.

Mayor Cox was in the chair and councillors Brydle Sanderson Sanderson, Broughton and Newham were present.

Mr. Lawson waited on council and asked permison to move his stable to other property The matter was left in abeyance for investigation.

The License Committee appointed to investigate the question of allowing police dogs to run at large, reported progress.

J. W. Mathany and A. Mc Gimpsey wrote council asking for approval of their application for soft drinks licenses. The applications were approved

Solicitor Baird was instructed to prepare a letter outlining the meaning of the Tax Consolidation Act.

The accounts as passed by the finance committee were approved for payment.

Rev. H. S. Tramnet was appointed to fill the vacancy on the Board of Health, caused by the removal of Rev. Stewart.

In the Tennis Tournament now in progress in Medicine Hat there are three entrants from Redcliff in the Men's Singles, D. Jasen G. Evans and W. Paterson

Cadets Win The Physical Training Shield 3rd Time

Were First in One Competition And Second in Another

Word was received last week end from Major Miller, provincial cadet inspector, that the local physical training team of sixteen boys, had once again headed the province with a score of 94 %. The school thus wins the Army and Navy Veterans' Trophy for proficiency in physical training for the third time in the past four years. A medal awarded by the Lord Strathcona Trust, goes to Keith Ellis, the team leader, and a cash grant of twenty dollars to the school.

In the Gravely Shield competition Camrose led Redcliff by one point. This shield is given for the best physical training class exclusive of the picked team which competes for the Army and Navy Veterans' trophy. Actual percentages of the leading schools were as follows: Army and Navy Veterans Shield—Redcliff, 94; Strathmore, 85; Vegreville, 74.

Gravely Shield—Camrose High School 88; Redcliff. 87; Camrose Public School, 85.

Camrose and Vegreville have always been serious contenders for honors, but Strathmore sprang a big surprise this year by coming second to Redcliff in the Army and Navy Shield competition.

Garbo Shines in Finest Role of Her Career

Proves Impressive, Stirring and Lovely Picture

"Queen Christina," the long expected picture reuniting Greta Garbo and John Gilbert, opened today at the Monarch Theatre, Medicine Hat. The picture, a spectacular presentation of seventeenth century romance as depicted in the life and loves of Sweden's famous queen, is primarily historical because it brings Gilbert back to the theatre fans after his announced retirement to private life and after a five-year screen separation from Garbo.

It is a picture based authentically upon events & customs of the times and presents elaborate historical settings, which for their beauty and accuracy, have seldom been equalled.

The story deals with Christina who, after being reared as a man and who was crowned King of Sweden, finds tempestuous love through the visit to her court of John Gilbert, who portrays the authentic role of Ambassador Antonio Dimitelli of Spain.

Their open love affair incenses the nation against Christina and her people repeatedly clamor for her marriage to Prince Charles, one of her countrymen. She is finally forced to expel her lover from the country, but abdicates her throne immediately after in favor of Prince Charles and flees in pursuit of Antonio—to find him slain in a duel with her Lord Treasurer. The performance of Garbo is undoubtedly the finest of her career.

Obstacles To International Agreement

Obstacles to international agreement are many and various; so many, so various as to becloud the vision of the conferees and defeat the ends sought.

Particularly is this true when a complex of nations is represented round the conference table. Despite the good intentions of conferees, the high sentiments they express and the noble purposes they proclaim, invariably dissonance interrupts the even tenor of the proceedings, divergent points of view protrude themselves and, with each interruption and each protrusion, practical agreement becomes the more remote.

The conflict of opinion appears less with regard to the general objective sought, as with regard to the methods by which that objective can be reached. In the ultimate analysis, political rather than practical issues prove the stumbling block.

These thoughts are occasioned by the succession of disasters which has befallen world conferences held for perfectly laudable purposes during recent months. The League of Nations itself, perhaps the greatest agency for world co-operation yet devised, has suffered considerable loss of prestige through recurrent manifestations of local interest, local jealousies, prides and susceptibilities. In matters such as the drug traffic, in which public rather than political and national considerations are paramount, the League has been able to take decisive action and render invaluable service. But where political and national interests and prejudices are involved, directly or indirectly, its decisions have been of less unanimous acceptance. In fact, they have seldom been effective because they have been largely ignored.

In spite of the League and the large body of opinion supporting it, where matters of national significance have been broached, the nations involved have proved a law unto themselves, using the simple expedient of withdrawal from the League as a means of asserting their right to go their own way. Disarmament questions have brought prominently into the foreground this conflict of national viewpoints, and this insensate desire for autonomy in matters affecting the peace of the world. There can be little question that world opinion, generally, favors disarmament on a sane and safe basis. It is equally true, however, that there is sharp clash of opinion as to what the basis should be and as to the methods whereby it should be undertaken. World disarmament conferences have proved futile, so far, in spite of the unanimity voiced by national spokesmen as to its desirability. All nations, it appears, are in favor of disarming—provided the other fellow does it.

Strange as it may seem, while world conferences on the question are disheartening failures, the same can not be said with respect to understanding on the subject between particular nations. Bilateral disarmament agreements appear easy, by comparison. Where two or three nations are involved, amicable solutions come readily to hand. Britain, for example, has little difficulty in reaching understanding with Italy, Italy with France, and so on. Even with Germany amicable negotiations are possible. Yet, when Britain, Italy and France sit around a conference table with Germany, it becomes immediately impossible to focus all eyes on the same objective and on the same means of achieving that objective.

This is not to say that Germany is entirely at fault, or that the blame attaches to any particular one of the parties to the conference. It is apparently due to the complications which arise with every addition to the conference. Compromise as between nation and nation is easy; between three nations it is a little more difficult, but not impossible; when four nations are involved. Perhaps then, the real solution is to be found in multiplying bilateral disarmament agreements until the whole world is involved and all the nations are committed to peace.

The same course may be found the ultimate solvent of the world wheat problem. Apparently, the London Wheat Agreement has foundered on the shoals of national aspiration for, as this is written, the Argentine has virtually negatived the good work accomplished in the London conference, and the United States, in reprisal, is threatening unlimited production and the dumping of its surplus on the markets of the world.

The London conference resulted in what has been acclaimed as a unanimous agreement representing the first really co-operative arrangement yet reached by the nations of the world. It was not, however, a finite thing, in itself. It left certain important decisions for later consideration, particularly the matter of minimum prices. Experts met at Rome to discuss prices in accordance with the terms of the agreement, only to be met by objections from the Argentine and demands from that country for an increase of 40,000,000 bushels in her quota allotment. Having already virtually exhausted her export quota for the year as set in the London Agreement, the Argentine demanded an additional 40,000,000 which could only be given at the expense of other great exporting countries, including Canada. The price conference, however, reached certain tentative conclusions which were submitted to the governments involved.

The next stage in the proceedings was the London conference on prices to amend or ratify the decisions of the Rome discussions. Here again, clash of national interests proved a handicap. Doubts have been raised whether or not price-fixing by a central body is a sound practice to adopt. In fact, British grain men have been emphatic and outspoken on the subject. The head of the London grain exchange had no hesitation in stating that the representatives of the various nations were amiable gentlemen "but they knew very little about wheat". With warnings against price-fixing, demands for increased quotas, and threats of unlimited production, the whole agreement appears in jeopardy. Obviously, the complexity of national interests is accentuated in conferences on so large as scale as that at London. Perhaps (be it repeated) the solution may be found in a series of bi-lateral agreements involving all interested parties.

Used Sign Language

Sign language was used by members of the Western Canada Association of the Deaf as the medium of presentation at a unique concert in Saskatoon. A short play, given by school pupils, depicted early education of the deaf in this country. In addition, "O Canada" was rendered in the sign language.

Phones For Dinner Guests

Guests at a telephone service dinner at Greenwich House were able to talk to friends at the other end of the dining hall without leaving their seats, telephones being installed on the tables for this purpose.

Ordinary printers' ink is used in making fingerprints.

Health For Young Girls

Happiness For Tired Women

MILBURN'S HEALTH NERVE PILLS

Thousands of women become tired out and run down, become thin and pale, and profound weakness makes life a burden.

The whole outlook of life is changed when the nervous, sick headaches, the sleeplessness, the spells of dizziness, of weakness and discouragement, and the tired, languid feelings disappear with the use of Milburn's H. & N. Pills. They tone up the nerves, enrich the blood, and bring the health back to normal again.

"Britain Of The East"

Story Of Japan's Progress And Development Reads Like Romance

Whatever may be said of the aggressiveness of Japan in the Orient, it must be acknowledged that she deserves the designation, "the Britain of the East". Never in the history of the world has any of the backward nations made such gigantic strides forward in the path of civilization as has Japan.

The story of her progress and development reads like a romance. From the very time when she reformed her government and established democratic institutions she has gone forward in the path of educational and scientific progress and in industrial development at a remarkable rate. Her educational and scientific institutions are among the finest in the world. Moreover, her army and navy have reached a stage of development that is second to no other country. Hence, Japan is a nation so perfectly equipped from a technical and scientific point of view that her competition may well be feared by other nations. To make light of her industrial development shows a lack of appreciation of the remarkable progress she has made.—Brantford Expositor.

DEPRESSED BY ACUTE ACIDITY

There can surely be no doubt about the effectiveness of a remedy for acidity that can give such permanent relief as in this woman's case:—

"I suffered for many years from acidity in various forms," she writes. "At last it became so acute that every morning I woke with a gnawing pain and a great depression of spirits. I tried Kruschen Salts, and the effect was magical. The pain subsided and the depression lifted like a cloud. I have taken the daily dose of Kruschen ever since. That was about five years ago, and the Kruschen does not lose its effect."—(Miss) E. M. H.

Kruschen is so effective with acidity because it neutralises acid, takes all the torment out of it, and gently expels it from the system. And by stimulating your organs of elimination to perfect regular action, Kruschen will prevent this harmful acid from even accumulating again. After that you'll experience no more misery after meals.

Canada's Metal Industry

Dominion Dominates World Status President Of Mining Institute

Within 20 years Canada's metal industry has grown by such leaps that it was possible to-day for the Dominion to produce practically all the copper, most of the lead and zinc and all of the nickel needed in the Empire, S. G. Blaylock, president of the Canadian Institute of mining and metallurgy, stated.

He was addressing a complimentary banquet given to him by the Grand Forks Board of Trade in connection with the convention of the Associated Boards of Trade of Eastern British Columbia.

Canada dominates the world in copper, nickel, lead and zinc, said Mr. Blaylock.

Mr. Blaylock thought there was little likelihood of the price of gold dropping for years to come. As a metal producer, the Consolidated Mining and Smelting Company, of Trail, of which he is vice-president and general manager, was not concerned with the 10 per cent. tax on gold. Nickel, lead, copper and zinc producers would be entitled to glad tax millions in taxes on these metals if the price was 75 per cent. over the normal price of 20 years, he stated.

Japan Buying Scrap Iron

Recent Cargo From Australia Contained Variety Of Articles

Japan has been picking up scrap iron all over the world, and one of the most varied cargoes of this kind arrived the other day from Australia. There were steel rails red with rust, old sewing machines, and automobile fenders. On the top of one heap was a battered trombone. Scores of old drums ranged side by side with piles of wormout machinery, car wheels, cooking stoves, and scores of other ancient and apparently useless articles, together with hundreds of thousands of old horseshoes. Even obsolete cannon were in the cargo.

A Good Definition

Crooning? Here is a college professor's illuminating definition of it: "An exaggerated and distorted expression of emotional feeling, a kind of semi-musical noise that is emitted from the throat and attractive to some persons because it is something new. Only people of low intelligence like it." It was described thus by Dean John Patten Marshall of Boston University College of Music.

Wants Room For Expansion

Mussolini Expresses Need For Italy To Seek Room In Africa And Asia

Geographic and historic reasons were given by Mussolini in an interview with Hector Bywater, editor of the "Daily Telegraph" in Rome, for the expansion of Italian power in Africa and Asia, and the need for a strong navy.

During the interview, Mussolini said:

"Thirty provincial capitals are situated on the coast. Rome herself is near the sea. Geography is one of the immutable factors that determine the destinies of a nation.".

Then he went on to say:

"Geography and history both warrant us in taking Asia and Africa as objectives. We are nearer to those two continents than any of the greater western European powers. No one should mistake the meaning of our task. We are not thinking of any territorial conquest, but everyone should know that we are thinking of a natural expansion allowing us to co-operate with the nations of Africa and the Far East."

Mussolini then turned to the problems of the League of Nations and of disarmament, saying:

"The principle of the reform of the League of Nations, which is almost universally accepted, is clear. The reforms that are being considered should only be undertaken after the closing of the disarmament conference, because if this conference fails, there will be no need to make any reforms, it will be enough to consider the work of the League of Nations as ended.

"It is generally considered that the conference will fail, at least as regards the most important objectives. The greatest armed powers will not disarm; those that are not armed will be in a position to arm with a more or less defensive purpose."

Paris Hotels Face Ruin

Taxes Heavy And American Tourist Business Falling Off

Instead of opening the customary new extensions as the tourist season starts, one leading Paris hotel, the Plaza-Athanee, already has closed its doors, and numerous others are on the verge of doing likewise.

Hotel managers blamed two factors for their plight. First, that an average of one-third of all money taken in must be sent to the state in the form of taxes. Secondly, that the American tourist business has almost evaporated.

"If this continues for a short time more we'll have to close up, too," the director of a leading hotel in the Etoile district declared.

Here are a few of the hotel taxes:

Six per cent. of every penny collected as a luxury tax.

Four per cent. of all room bills as a city tax.

A social insurance tax.

A tax for apprentices.

A tax for mutilated soldiers.

A tax for operation.

A property tax.

This totals from 25 to 50 per cent. of receipts.

New School Readers

Uniform Standard To Be Adopted By Four Western Provinces

A new standard of school readers has been adopted by representatives of the four western provinces to be used in the public schools. These representatives have been meeting from time to time for the past two year judging the contents of the books. The seven books in the new series are to be known as "Highroads to Reading." The books will be adopted as school readers for the fall term of 1935. All will be uniform in style and will be admirably bound and will have colored illustrations. The printing will be done in Toronto.

The fox-tail lily is a striking looking plant for the back of a large border. It is also known as "the desert candlestick" on account of its long strap-shaped leaves and tall spikes of flowers like a column or a candle.

"Blue" Spells

Reduce some women to the petulant shadow of their own smiling selves. Others take the Vegetable Compound when they feel the "blues" coming on. It steadies quivering nerves . . . helps to tone up the general health . . . gives them more pep . . . more charm.

Radio Signals For Aviators

Ingenious Device Will Keep Fliers In Defined Lines

A device for visually interpreting signals of aeronautical radio range beacons has been developed by W. E. Jackson and L. M. Harding, radio engineers of the U.S. commerce department's aeronautics branch, according to Rex Martin, assistant director of aeronautics.

Signals, Martin explained, are received through headphones by airmen who rely upon them for guidance during periods of poor visibility.

The device features an indicator which, fitted in the instrument panel, is similar to the contrivance used for blind landings. It is open-faced and has two needles—one vertical and one horizontal. The vertical needle, Martin explained, is chief indicator and when an aeroplane leaves the course defined by a radio beacon, this needle will move accordingly. However, he added, if the aeroplane is exactly on course, the vertical pointer will remain in centre of the dial.

The horizontal indicator, the official revealed, shows the volume of received signals, which the pilots may adjust as he sees fit.

Egg Trade Responsibility

Responsibility As To Eggs Below Grade Placed On Seller

In case of dispute about properly marked cases of graded eggs, the Canadian egg regulations are quite explicit. No case or container of eggs is considered to be properly marked if, upon examination by an inspector, the case is found to contain more than an average of 6½ per cent. below grade, apart from breakage. In transactions between wholesalers, or between a wholesaler and a retailer, any complaints by the purchaser with respect to eggs below grade must be made to the seller within 36 hours of the receipt of the eggs. Thus, responsibility as to eggs below grade is upon the seller for the period of 36 hours after delivery to the buyer. After the expiration of the 36 hours the responsibility as to eggs below grade is upon the person in whose possession such eggs are found.

For Civil Servants

Want Temporary Employees Brought Under Civil Service Act

Representations on behalf of various classes of civil servants were made by V. C. Phelan, president of the Civil Service Federation of Canada, before the commons civil service committee.

Mr. Phelan asked that 316 long temporary employees in various government departments who had been eligible for permanent appointment prior to 1927, but through negligence or some other cause were not appointed, now be brought under the Civil Service Act.

Public School Education

Public school education in Canada costs $63.63 per year per pupil, according to reports published by the Canadian government. The report shows the total expenditure is about $165,000,000 a year. In 1932 there were 86,216 teachers, 2,593,116 pupils in the Canadian school system.

Increased Payrolls

Movement In British Columbia To Improve Working Conditions

Payrolls in British Columbia have been increased by approximately $200,000 per month since the provincial department of labor started its drive through the board of industrial relations and other agencies to improve working conditions within the provinces, Hon. George S. Pearson, minister of labor, has estimated.

In the sawmill industry alone, the advance was about $85,000 a month, he said. The aim of the board so far, Mr. Pearson said, had been to set minimum wage scales as high as could be paid by the industries affected, but not so high they would be forced to stop operations. As conditions improved within a particular occupation, the level could be raised if necessary.

Trying To Find Secret

Manufacturers Seek Buddhist Method Of Producing Stainless Steel

To study four columns which have stood for 2,000 years without showing a sign of decay or dust, a body of European steel manufacturers are visiting India. They hope to learn how people of those days produced stainless steel. The columns were erected by Asoka, the great Buddhist emperor, in four districts of his Indian Empire. Each stands on a high rock and is inscribed with the laws of Asoka's reign. Through the centuries earthquakes have not shaken them and storms have not rusted them. The secret of their making is believed to rest with descendants of the masons, and the steel manufacturers hope to learn this.

Soybeans Profitable

The Farmers' Advocate says many livestock men, and dairymen particularly, are finding soybeans a profitable crop to grow. The beans add to the protein content of the meal mixture and for hay they are both productive and palatable.

CHILDREN'S CONSTIPATION Ended!

Mrs. H. T. Rowsome, Athens, Ont., writes, "My baby boy was troubled with constipation. I gave him Baby's Own Tablets as directed . . . Before I had given half the box the constipation was righted." By relieving constipation, Baby's Own Tablets prevent more serious ailments developing. Much easier to take than nauseating laxatives and perfectly safe for all little folk from the wee babe to children of school age. 25c package.

Scientists Invite Us To Enlarge Our Concept Of Universe Beyond Anything Heretofore Presented

Late news from the astronomical world raises this serious question: Is there collusion between the Administration at Washington and the devout astronomer for the purpose of making the world familiar with large numbers? Or is it rivalry in the expansion of the Arabic notation? Whatever the answer be, the latest from that redoubtable searcher of the beyond, Dr. Edwin P. Hubble of the Mt. Wilson Observatory, invites us to enlarge our concept of the universe far beyond anything heretofore presented by Jeans, Eddington, Millikan and the others, fervid expansionists though they be.

Dr. Hubble's findings are little short of breathtaking. The universe, declares he, is a finite sphere with a diameter of some six billion light years; and when this distance is calculated on the fact that light travels at a speed of 186,000 miles a second, the Arabic notation itself is put to the test. But that is only the beginning of his astounding declaration. The universe consists of 500,000,000,000,000 (five hundred trillion) nebulae, each stellar unit of which is 80,000,000 times as bright as the sun and 800,000,000 times as massive. How these figures stagger the imagination!

And only a year ago, Dr. Hubble was content with observing, through the 100-inch telescope on Mt. Wilson, nebulae 150,000,000 light years away. Who shall say this has not been a year of unprecedented expansion?

We are also assured that beyond this universe, 6,000,000,000 light years is diameter, nothing exists, not even cosmic dust. That is to say, this universe with which Dr. Hubble deals so familiarly marks the end of space, for it is held that space cannot exist without matter.

Here is another important fact. The totality of this mass of matter in the universe has not increased. Because of the constant expansion, it follows, then, that the distance between the component units has greatly increased, that is to say, it is continually an emptier universe. In the question of mass, Dr. Hubble likens the earth to a grain of sand in this immense space.

If all these marvelous details of this expanding universe have been revealed through a 100-inch telescope, what further wonders will be discovered when the huge mirror now cooling at Corning, N.Y., is ready for use? Dr. Hubble believes that beyond the present frontier will be found countless galaxies or nebulae, all moving at a terrific speed—where? The Psalmist was, according to modern astronomy, speaking in very limited terms when he attempted to indicate the infinite nature of the divine presence.

As we ponder the problems raised by discussion of the expanding universe, especially the accepted theory of relativity that space and matter must co-exist, this question inevitably confronts us: If the conclusion of modern physicists and metaphysicians that matter in reality is non-existent be true, does it not follow that space must give way to infinity?—Christian Science Monitor.

Where Credit Is Due

Newspaper Advertising Important Factor In Keeping Things Going

It is rather noteworthy that at the April meeting of the board of directors of the Canada Cycle and Motor Company, Limited, J. W. Gibson, vice-president, explained that the important factor in enabling the company to "beat the slump" was a liberal policy of newspaper advertising. He declared that careful advertising over a period of years had created a trademark in the C.C.M. that made it an asset more valuable to the company than its whole plant and equipment. That is a remarkable statement, but the more it is studied the more it will be seen to be true.—Brantford Expositor.

Makes Sound Waves Visible

Sound waves are made visible, tracing moving pictures of the human voice with a pencil of green light, by means of a device demonstrated in a Denver radio station by R. C. Jensen of Schenectady, N.Y., before a meeting of the Colorado Society of Engineers. The instrument—called a cathode ray oscillograph—is to be used in testing the quality of sounds broadcast from the station.

Rare Relic In Museum

Manitoba Treasures Only Neolithic Pot Found On Prairies

Symbol of the dawn of community life, a simple clay pot which dates back to the Neolithic era is one of the treasured possessions of the Manitoba museum in Winnipeg.

The pot, the only one of its kind ever found in the prairie provinces, was discovered a few years ago near Hartney, in south-western Manitoba. W. D. Magwood came across it in a sand hill and it was later turned over to the museum as a relic of the dawn of civilization in Manitoba.

First of its kind, the pot is built on crude lines, with a small rounded base. The lip is curved outward and designed with the familiar herringbone pattern found on many types of early pottery in widely-separated parts of the world. The curved lip was so designed to carry the flames away from the inside of the pot.

It was used for cooking grain and represents, according to Harry Rand, museum custodian, the first signs of organized community life in prehistoric days. Similar pots have been found more commonly in Ontario and in the Mississippi and Missouri valleys. But these are nearly all of later date.

By Ruth Rogers

SHIRTS AND SHORTS SCORE A SPORTS HIT AND YOU'VE A SKIRT TO DON FOR SPECTATOR SPORTS

Grasp this opportunity to order this pattern today. It includes the shirt and shorts and skirt.

It is the smartest outfit for Tennis! Camp! Hiking! Beach! Mountains!

For tennis, the shirt and shorts are indispensable. And after your game—you've a skirt to don. It's so easily slipped into and adjusted. It buttons from waist to hem.

If you're going to camp, you'll want several of these smart rigs.

Pique, peasant linen, striped or checked seersucker, plaided gingham, cotton shirting broadcloth, etc., are attractive mediums.

It's very easily fashioned and surprisingly inexpensive.

Style No. 782 is designed for sizes 10, 12, 14, 16 and 18 years.

Size 16 requires 3½ yards of 39-inch material for blouse and skirt, 1¼ yards of 39-inch material for shorts.

Price of pattern 20 cents in stamps or coin (coin is preferred). Wrap coin carefully.

HERO OF THE ARCTIC SAGA HONORED

Professor Otto Yulevitch, who is credited with preserving the lives of 101 members of the Soviet Chelyuskin expedition until rescued after three months on an ice floe, is shown at Washington being welcomed by the Soviet Ambassador Troyanovsky and his wife.

An Interesting Survey

Shows What American Women Like Best In Newspaper

A survey recently conducted by the school of business of the University of Chicago gives information on what interests the average woman newspaper reader. According to the replies received, bridge lessons and foreign news find little favor with the fair sex. It is also significant to note that women show more interest in editorial than they do in crime news. The more important findings of the survey are summed up as follows:

First page news cartoons commanded 83 per cent. of the votes, with the fashion pictures in the women's section ranking second with 78 per cent. The comic strip came next with 68 per cent., followed by the health features with 48 per cent. and letters to the editor with 47 per cent. Foreign news ranked last with 9 per cent. of reader interest, and bridge lessons were next to the bottom with only 11 per cent.

Perhaps Canadian women's preferences as to newspaper contents differ from their American cousins. Anyhow "yellow journalism" is practically non-existent in Canada. Nor do Canadian papers play up crime news as much as they do in the United States.

The findings tend to show that bridge instruction is no longer keenly sought. Like some of the old favorite pastimes it seems to be on the downgrade. Or is it a case of players having become so competent and self-reliant that they no longer need lessons?

Selling Bicycles By Mail

Bicycles can be sent by parcel post through a plan thought out by a manufacturer in Birmingham, England. He has planned a distribution of the Machine's parts in five packages which come under the Post Office Department regulations. Printed instructions tell how to assemble the bicycle at home.

Farmers' Chief Difficulty

Cannot Sell Produce For Sufficient To Buy Necessities

Rev. John Livingstone Brown, Liberal-Progressive member for Lisgar, Manitoba, gave the House of Commons something to reflect over recently when he said that one of his constituents told him, "By spring you will find me the fattest and raggedest man in the country."

"He simply meant that on the farm he had plenty to eat but that the prices at which he was able to sell his produce was not sufficient to enable him to clothe himself properly," said Mr. Brown.

"Another man said to me in a jocular way, 'I wish this depression would end. I am tired of eating turkey.' It is true that there are exceptional circumstances in the West at the present time but the difficulty in most cases is not that farmers have not sufficient to eat but that they cannot dispose of their surplus at a price that will enable them to buy clothing and the other necessities and conveniences that every civilized man has a right to expect."—Lethbridge Herald.

B.C. Shipping Hay

First Consignment Went Forward To Straits Settlements Recently

The latest addition to the wide variety of commodities which annually are shipped from Vancouver to many parts of the world is baled hay for the Straits Settlements. B.C. already sends milk and fish to Africa, Europe, Asia, Australasia and South America; plant foods to Europe, Java, Hawaii, South America, and fish meal to parts of Europe and United States. People use B.C. flour in all the countries of the world. Australia and New Zealand eat B.C. butter in season, and Europe eats apples and other fresh fruits.

Now, it is reported, B.C. is shipping hay to Straits Settlements for elephants, the first shipment having gone forward recently.

New Rules And Regulations To Govern Commercial Poultry Hatcheries Throughout Canada

Has Invaded Canada

Infectious Bronchitis Found In Poultry Of Two Provinces

Infectious bronchitis has been recognized in North America since 1922 and has been increasing in economic importance annually ever since. It has been reported in at least 39 states and in at least two provinces in Canada, according to a statement by W. R. Hinshaw of the California College of Agriculture at Berkeley. "In the majority of the instances," the report states, "the disease has been introduced into new localities within the state by the purchase of mature or partly grown stock from infected areas.

"Concentration of poultry ranches and continuous brooding of chicks in a community were found to be important factors influencing the yearly recurrence and spread of laryngotracheitis. Evidence to support the carrier theory was obtained, but controlled experimental data were lacking.

"Prevention in an infected area is a community problem and consists of proper attention to disposal of dead birds, manure, and litter; the control of mechanical carriers; attention to the cleaning and disinfection of secondhand feed sacks and poultry crates; and the control of community and plant sanitation, as well as individual attention to the health of birds. Prevention in a disease-free area involves precaution in the introduction of stock, in addition to the above recommendations."

"No satisfactory treatment for the disease was found. Careful nursing, attention to the comfort of the birds, avoidance of excessive excitement, and proper feeding were observed to be the best control measure."

Clever With Needle

Prince Of Wales And Other Men Find Work Restful

Do you know that the Prince of Wales is really clever with a needle? Among the trophies of his skill is a delightful paper-weight worked in petit point by His Royal Highness, which he had mounted in silver for a present for the Queen. The Prince has worked the initials M. R. in yellow surmounted by a crown worked in, red, yellow, blue, and white, all on a black ground. On the back are his own initials, E. P., and the date, 1932. The worked is adapted from an Elizabethan design at Windsor Castle.

Many men find needlework a real tonic to the nerves after a hard day's work. Lately the Duke of York has been trying his hand at wool embroidery, and Lord Harewood is helping the Queen Royal to work a set of chair seats.

Men apparently are taking up rug-making in increasing numbers, and this has the great advantage of being a perfect armchair occupation with a pipe for accompaniment. The Prince of Wales's paperweight has been lent by the Queen for exhibition at a London show of English Needlework (Past and Present).

Regal Barley

Of recent years, a number of promising smooth-awned barleys have been produced by different plant-breeding institutions, including the Dominion experimental farms, but these varieties have not yet been tested for a sufficient length of time to say which is the most desirable. For the present, however, the variety called Regal appears most promising in the west.

New Metal Alloy

A new beryllium-copper alloy is said to be non-sparking under any conditions and hard enough to cut steel. The new metal will be valuable in mining and other industries where there is often grave danger of explosions caused by sparks from tools.

Know His Flowers

Another one for Mr. Ripley. Teddy, mice chaser of a florist shop in Boston, knows his carnations. If any of the carnations are not up to the standard, Teddy, in his early morning rounds, pulls the withered blooms out of the vases with his teeth, leaving the fresh ones to bloom.

Oil from giant turtles from 250 to 700 years old is now being refined for use as a cosmetic.

The mighty cuttlefish has arms long enough to encircle a whale's body.

As a result of co-operation between the provinces and the Dominion department of agriculture, new rules and regulations to govern commercial poultry hatcheries throughout Canada have been made possible with the passing by parliament of an amendment to the Livestock and Livestock Products Act. This means an important safeguard to an industry that in egg production alone represents an annual turnover of about $30,010,000. Already five of the provinces have agreed to adopt the new hatchery policy.

The proposed regulations embody the present hatchery approval rules which have been in operation for the past six years on a voluntary basis. Under the new policy, which will be proclaimed with respect to any of the provinces which desire to adopt it, all commercial hatcheries will operate under the new regulations which provide that such hatcheries shall set only eggs from flocks approved by the provincial authorities; that the hatcheries and their advertising shall be under the supervision of the livestock branch of the Dominion department of agriculture.

According to this plan the quality of chicks produced in commercial hatcheries will be substantially improved since they will be hatched from eggs produced by pure bred flocks inspected by the provincial authorities.

Under the provision in the regulations that all commercial hatchery advertising shall be approved before being issued the public in those provinces where the regulations are in effect will be assured that any statements made in such advertising are correct.

Argentine Fights Locusts

Galvanized Iron Walls Being Built To Stop Invasion

Argentina has ordered hundreds of miles of very smooth galvanized iron sheeting to be used in building walls across the country to stop invading locusts. The sheeting will cost $2,500,000 and construction expense will be in the hundreds of thousands of dollars. The government plans to fight the locust when he is a crawler before his wings develop. It is then that he begins his devastating march. A polished wall of iron sheeting will prove too smooth to climb, and if the locusts crawl along the barrier they eventually will land in a trap. Men will be stationed there with rakes to get the unwelcome visitors into large pits, where they will be destroyed.

Canadian Oath Of Allegiance

Has Been Made Simpler By Measure Put Through House

The House of Commons recently gave third reading to the Oath of Allegiance Act, a measure which greatly simplifies the oath and brings it into conformity with that adopted in the United Kingdom and other portions of the Empire. The new oath reads as follows: "I, (A.B.) do swear that I will be faithful and bear true allegiance to His Majesty King George the Fifth, his heirs and successors according to law. So help me God." The former oath was ponderous and resonant, one in which the person taking it swore to defend the King "against all traitorous conspiracies" and other treasons. The measure evoked no discussion.

Radium Rained Down During Thunderstorms

Carried Into Clouds On Same Principle As Moisture

Radium, the most precious of all the elements, is rained down on the earth during thunderstorms, it was reported in Washington before the annual meeting of the American Geophysical Union by G. R. Wait and A. G. McNish of the Department of Terrestrial Magnetism, Carnegie Institution of Washington. The thunderstorm, according to their report, concentrates radium, which is carried up into the clouds by ascending air currents, just as moisture is carried up to form the clouds.

The "Queen Mary"

"Queen Mary" likely will be the name of the much advertised Cunard liner "534," which is to be christened by the Queen at its launching Sept. 26, in the presence of the King. The choice of a name for the giant vessel has not been announced officially, but it is understood the Queen's assent to the suggestion that it be named after her has already been obtained.

THURSDAY, JUNE 14th, 1934

Here and There

One graduate of the Anglican Theological College of British Columbia and four undergraduates are out for a summer of adventure and color since embarking recently aboard Canadian Pacific coastal liner, "Princess Norah" for the Yukon. Her 100-odd passengers also included miners, prospectors and northern railway and steamship men going in for the season.

Portland, Oregon's 26th annual Rose Festival, world-famous for colorful pomp and pageantry, will be held June 11-14 next. The western zone of the Canadian Legion will hold its convention there as also the American Rose Society.

The Princess Elaine, popular Vancouver-Nanaimo ferry of the Canadian Pacific B.C. Coast steamship service, is back from overhaul with the very latest in lunch rooms installed aboard. It is 40 feet long and 15 feet wide, and is provided with lunch counter and tables.

General improvement in business is apparent throughout Canada although many problems still remain to be solved is the opinion of Jackson Dodds, general manager of the Bank of Montreal, who sailed for Europe aboard the Empress of Australia recently.

The Canadian Pacific 42,500-ton Atlantic flagship Empress of Britain completed her world cruise of 30,916 miles last month on arrival at New York and sailed again for Cherbourg and Southampton to be fitted for her normal season sailings between Southampton and Quebec.

An English bulldog, scotch terrier, two boxes of swan's eggs and four homing pigeons were among the Canadian Pacific Express shipments arriving at Quebec recently aboard the Duchess of York from Liverpool, Belfast and Glasgow.

"With a soundly administered unified system, Canada would be able to anticipate within a reasonable period of time, a balanced railway budget and would be able to finance any justifiable extensions which expanding settlement and development might in future demand," E. W. Beatty, K.C., chairman and president of the Canadian Pacific Railway, declared in a recent speech advocating unification, for administrative purposes of the two major railways.

History Of Seeding Machines

Form Of Seed Drill Seems To Have Been Used In Ancient Times

It is said that the first notice of a machine for drilling grain occurs in Chinese history. Of wheel-barrow form with a hopper for seed, it had three spouts which conducted the grain through three furrow openers into the ground. An old account in the British Ministry of Agriculture states that a form of drill has been used in India almost from time immemorial. Through cuneiform writing and illustration, mention is made of a seeding machine of Assyrian origin about 604 B.C. The description leads to the belief that it was very similar to that used in India, being a crudely formed plough of wood with a bowl-shaped seed container. Seed was carried to the furrow through a wooden spout.

Two thousand years elapse before history again mentions seeding equipment. In 1605 A.D., the Romans perfected a machine for sowing grain in drills or rows. Mounted on two wheels, with a rectangular seed container, three or four rows of seed were deposited into a broad, shallow furrow formed by a single broad furrow opener. In 1633 Alexander Hamilton in Britain wrote regarding his sowing machine "for small grane" but gave no explanation of his method. The first real explanation of the invention of a seeding machine was given by an Austrian, Joseph Locatelli, in 1662. This was mounted on wheels, had a rectangular hopper fitted with mechanism for regulating out seed which fell on the ground, and was then covered by a toothed device dragged behind. There is evidence that it was manufactured in Madrid 1664 and sold at a price fixed in the patent.

In 1669 John Evelyn presented one of these machines with printed instructions and operating directions to the Royal Philosophical Society of London, recommending its use. Later in 1701 Jethro Tull made some improvements on the machine but he was too far ahead of his time. After Tull many improvements were made by Dr. James Cook, an English clergyman. Through the 19th century, advancement in seeding machinery was rapid. Hornsby, an English inventor, brought out the first rubber conductor tubes or spouts, still used to some extent in modern grain drills. Between 1830 and 1850 the hoe furrow opener was perfected; this type is still used in some sections of the United States as well as in other countries. After 1850 agricultural engineers, recognizing that accuracy in placing the proper quantity of seed in each furrow was vital to producing best results, occupied many years developing the seeding mechanism now known as grain feeds or distributors.—W. L. Braley at the World's Grain Conference, Regina.

Preferred The British

Army Of The Rhine Won Good Opinion Of Germans

Why the Germans prefer the British to the allied nations was explained by General Sir Ian Hamilton, who has just returned from Germany.

"It is not in the least because of our officials, representatives, grandees, or millionaires, but because of their memories of the good old rank and file of the army of the Rhine," he told a British legion conference in London.

"On the Rhine the Germans had a wonderful chance of comparing the conduct of the various allied troops who were imposed upon them as conquerors during eight years.

"Whether it was to give a penny instead of a kick to a kid, or see an old lady across the road instead of hustling her into the gutter, there is no doubt that our rank and file won tons of golden opinions from all the German women."

Private Airplane Owners

United States Has Greatest Number Of Any Country

The United States leads the world in the number of private airplanes. Last year there were more than 1,200 machines in the country. France has 1,387, but this included many used for instruction and owned by clubs. France has the largest number of commercial planes, according to population, one to every 100,000 inhabitants. The United States has one for 500,000. Italy one for every 400,000 and Germany one for every 150,000.

The "butcher bird" is so called because it impales its victims on thorns.

FAMOUS MILITARY LEADERS AND BRITISH BATTLE PLANES TO ATTEND CELEBRATIONS

Field Marshal Viscount Allenby (top, inset), deliverer of Jerusalem from the Turks during the Great War, and Sir Roger Keyes, Admiral of the Fleet and director of the famous attack on Zeebrugge and Ostend in 1918 (lower, inset), have accepted invitations to attend the Canadian Corps reunion and other events during the final Centennial celebration period in Toronto in August. Five of Britain's famous Hawk Fury battle planes also will participate in the July festivities. Above is a view of this type of plane, claimed to be the fastest combat machine in existence.

Veteran Develops Hobby

Crippled During War Toronto Man Raises Tropical Fish

In the sun-parlor of a house in Toronto's west end a crippled little man sits day after day, watching the behavior of fish. They are tropical fish he has raised himself and he has watched them for eight years.

In his boyhood Bruce Carruthers caught fish, tadpoles and other inhabitants of ponds and lakes. He kept them and watched them, gaining a considerable knowledge of their habits. When the Great War broke out, he was 19 and enthusiastic. He enlisted and went overseas with the first Canadian contingent.

When the Germans advanced on St. Julien in April, 1915, a bullet whipped through Carruthers' spine and lodged under his heart, where it stayed for 16 months. He has never walked since that day, 19 years ago. He lay for months in an English hospital, where he was nursed by a tall, blonde English girl. She is now Mrs. Carruthers.

Time dragged on Carruthers' hands when he came back to Canada, and he turned to the interest of his boyhood—fish. In the sun-parlor of his home now small, brightly colored fish swim in bowls or 40 tanks. Time on his hands has enabled him to become an expert fish-breeder.

"It's a nice hobby for an invalid," he says. "My disability has handicapped me, but it has allowed me to watch my fish more closely than some other fanciers who work are able to do. I have probably seen more of their habits and learned more about them than lots of other men."

Interest in tropical fish, Carruthers says, is growing as they become more widely known. He has heard of instances in the United States in which people have taken tanks of fish rather than flowers to friends in hospitals, on the ground, the fish provide a lasting interest and do not die as flowers do.

"They have been a fine hobby for me," he says. "They have kept me occupied and prevented me from thinking too much of my troubles." He is a cheerful little man, but he becomes bitter at the mention of the war.

Carruthers is recognized as one of the leading authorities on fish in Toronto, where, officials of the Toronto Aquarium Society estimate, about 1,500 persons raise fish, most of them as a hobby, but a few professionally.—Guy E. Rhoades, Canadian Press Staff Writer.

Cleaning Took Long Time

First wash in 220 years was recently given to the dome of St. Paul's Cathedral, London, 170 feet above the marble floor in front of the altar. Clinging to narrow scaffolding planks only three or four feet wide, eight men scrubbed the accumulated grime from marble pilasters and gilt capitals. The cleaning took eight men eight months.

Hairdressers Worried

Hairdressers of Germany are worried over the campaign to induce girls to let their hair grow and plait in order to help the ribbon trade. Nearly 1,000 schools are displaying posters of young Gretchens with long plaits and big bows of ribbon decoratively arranged. If the campaign succeeds it may force many hairdressers out of business.

Approximately one-fourth of the habitable land on earth is under British control.

People In Britain Healthy

Insurance Official Reports Great Improvement In Physical Condition

The British people to-day, in spite of the war and the lean years of depression, are better in health and physique than ever they were.

This was a statement made by Sir Walter Kinnear, controller of the insurance department of the Ministry of Health, in a speech at the annual dinner in London of the National Federation of Employees of Approved Societies.

The mortality rate of the country as a whole, he said, is steadily decreasing.

There is taking place a gradual improvement in the physical condition and health of the people; life is longer and its physical character better.

Mortality from the great constitutional diseases has declined by nearly 25 per cent. in the past ten years.

Dangers In Kite Flying

Denver Electrician Warns Boys Against Metal On Cords

Boys who fly kites must be sure the string contains no metal, Electrician John Malpiede of Denver, Colorado, warned.

"If a kite cord containing any metal touches a high voltage electric line the boy is likely to be electrocuted," he said. "If such a kite cord should contact both a high and low voltage line fuses in many homes might be blown out.

"Only a short time ago a boy was severely burned when his kite cord struck a high voltage wire. The cord had a fine copper wrapping. It is a wonder the boy wasn't killed."

The First Country Fair

The first agricultural exhibition in North America was held at Windsor, Nova Scotia in 1760, and the 165th anniversary will be celebrated this year at the annual West Hants exhibition. A special program is being arranged and the committee plans to unveil a tablet commemorating the historic event, which led to the country fairs now so important to agricultural districts throughout the country.

The grinding teeth of elephants reach a weight of 20 pounds each.

Diversified Occupations

Last Census Shows Canadian Women In Many Fields

In Canada there is one male apprentice in the millinery trade. There is one woman, on the other hand, who is manager of a coal mine. We cannot give you the names. The simple facts are extracted from the 1931 census of the occupations of gainfully employed persons in Canada.

There are five women who are foremen of mines other than coal mines. There is one woman who owns a soft drink plant. Two women own or manage tobacco plants. One woman owns or manages a rubber products plant. There are three women butchers in Canada against 9,015 men in the same occupation. There is one woman who is a harness maker and one who is a lithographer but there are six who are wood carvers and nine who are process engravers. Six women own garages and two act as auctioneers. The census states that there are six female news boys which seems to be a contradiction in terms. There are five women magistrates and two women architects. And just to show how diversified are the occupations of the modern woman, there are five who are employed as stage hands.

Most of the stenographers are women. There are 65,000 females against 3,500 males in that profession. Waitresses numbering 12,800 are just ahead of waiters numbering 11,200.

There is no profession listed in the census in which men are not employed. But on the other hand there are scores of jobs to which women apparently have not aspired.—Financial Post.

Easy To Believe

The United States weather bureau got out its instruments at the height of one of its bad dust storms and found there were 9,450 particles of dust in each cubic centimeter of air. Normally there are 400 particles per cubic centimeter. A square mile of the atmosphere one foot thick contained 1,250,000,000,000 dust particles, the bureau estimated.

"Do you know that nice looking boy?"

"Yes, well enough not to speak to."

An Interesting Business

Brooklyn Man Gets Good Prices For Imitation Food

Mr. Henry ter Linden (small "t" is correct), spends his time making imitation food. "It's a good business. He displays samples of upward of two hundred different items of fake edibles in his shop in Brooklyn. You can get an imitation slice of bread for a quarter, a leg of lamb for four dollars. His products are made of wax and painted. He boasts that you can't tell them from the real thing until you touch them, or try to eat them. He has a staff of three men who mold the wax and a lady artist who does the painting. They work from real models. If they're doing a steak, Mr. ter Linden buys them a swell steak. Afterward they cook it and eat it.

Mr. ter Linden is a serious man. His clients are mainly delicatessen, confectionery, restaurant, refrigerator, and five-and-ten-cent-store people. They use his food for window and counter displays. You've seen electric refrigerators in store windows filled with his toothsome-looking butter, meats, vegetables, milk, etc. He has, of course, strange orders now and then. He made forty-eight Virginia smoked hams and as many shoulders for the War Department. He doesn't know what the Army did with them; didn't ask, and wishes now he had, for it bothers him. Bellevue hospital bought a big array of his foods. They use it to explain diet to people who can't speak English. The du Pont people brought a great mess of his asparagus; for salesmen to take around wrapped in cellophane.

Practical jokers patronize Mr. ter Linden constantly. He has no special feeling about them one way or the other, although if somebody is deceived into biting one of his wax muffins, he considers it a tribute to his art. Wags buy chiefly chops, ice cream, rolls, and frankfurters. One lady about to become a hostess bought ter Linden's steak, shrieking with laughter as she did so. As Mr. ter Linden points out, this may be a good joke but you couldn't carry it through a whole dinner.

Many of the luscious dishes you see in color-plate advertisements were photographed from ter Linden imitations. They are easier to photograph than real foods, he says. "Take ice cream. You can't photograph real ice cream. Just get it posed right, and it melts." Several months ago, he worked up some numbers for Eskimo Pie. Furniture stores buy whole turkey dinners, cranberry sauce and all, at Thanksgiving time and Christmas. He doesn't just sell locally; gets orders from all over. The American University at Beirut, Syria, ordered a lot of his food, "for educational purposes," they said.

Mr. ter Linden says cheese is the easiest thing to make. If you're interested in phony foods, you can buy a special Get Acquainted Set for $3.35: a porterhouse steak, a head of cabbage, an apple, a pear, an orange, and a peach.—New Yorker.

Mounties Start Museum

Hope To Gather Relics And Data Of Early Days

A museum, which, it is hoped, will ultimately give a complete history of the force and be of interest to the entire Dominion, has been started at the Royal Canadian Mounted Police barracks in Regina.

The museum is climbing from a small beginning, with photographs of early scenes at present constituting the major attraction.

With many other relics sought, a nine-pound, muzzle-loading gun, of the type dragged by horses, has been secured and will shortly be placed in the museum. The gun is one brought west when the long arm of the law first reached over the plains in 1874.

Among other relics sought are copies of annual reports, arms, old uniforms, hand-written reports and the major cases solved by the R.C.M.P. in the early days.

A Huge Thermometer

Construction of a colossal thermometer in Paris has been started and shortly its 525 feet of temperatures will be flashing throughout the day. It will be controlled by a small master thermometer, as the huge Eiffel clock is controlled by a diminutive edition of itself. The entire thermometer will be 984 feet high, only a foot lower than the Eiffel Tower.

Since the Washington Monument was illuminated in 1931, an average of ten birds a day have been braining themselves against it.

During the Russian-Japanese war, a railroad was laid across the frozen surface of Lake Baikal, Siberia.

To Modernize Palestine

British Government Guarantees Loan Of Ten Million Dollars

The Holy Land is marching with the times.

A resolution authorising the British government to guarantee a $10,000,000 loan for Palestine, which is administered by the United Kingdom under League mandate, was introduced in the House of Commons by Leslie Hore-Belisha, financial secretary to the Treasury.

Nearly half of this sum, or $4,665,000, will be used for water supply and drainage schemes in Jerusalem, Haifa, Hebron and other places. Another $2,035,000 goes for public buildings, including a new post office and telephone exchange in ancient Jerusalem.

A sum of $1,000,000 is earmarked for agricultural credits, to enable the government of Palestine to assist in a long-term credit scheme for Arab and Jewish cultivators alike in the plains, and Arab cultivators in the hill districts.

Another $1,250,000 will be employed in the re-settlement of Arabs displaced by the increased Jewish settlement—partly caused by the exodus of Jews from Nazi Germany.

For construction of an oil work and reclamation scheme in Haifa, the remaining portion of the loan of $1,050,000 is set aside.

Kindness To Animals

Children Should Be Taught That Cruelty Is Inhuman

Schools throughout the United States are devoting time during this "Be Kind to Animals Week" to teaching gentle consideration for the rights of those who cannot speak for themselves. There still are innocents who must suffer the knife of the vivisectionist; the sticks, stones, and tins cans of thoughtless children; the hunger and loneliness of abandonment, and the angry or fear-inspired abuse of adults.

If every teacher in every school were to take but fifteen minutes during any week for serious discussion of the problems, the work of humane societies seeking disarmament between men and beasts would be considerably lessened. Abandoned and maltreated pets would gradually cease to be a problem. Neither would wild animals flee at the sight of men if sentiment hunters became the style instead of gunners and trappers.

Work for the protection and well-being of the "lesser ideas" of God cannot be regarded as a minor activity, but rather as an endeavor worthy of highest effort. In keeping with our modern conception of a kind and understanding Deity, men should be as one with Him in the administration of His gift, kindly dominion, so that the full prophecy of the eleventh chapter of Isaiah may come to pass:

They shall not hurt nor destroy in all my holy mountain: for the earth shall be full of the knowledge of the Lord . . .—Christian Science Monitor.

Going To New Homes

Saskatchewan Mennonites Trekking To Farms In Northern Area

About 60 families, mostly Mennonites, from the rural municipality of Swift Current, are trekking to north and northwest of North Battleford, where they will settle, under the government land scheme. Mr. Driedger, of the provincial department of natural resources, supervised preparations for the journey of the settlers into the northern section of the province. A number of settlers from the Coulee municipality joined those of Swift Current municipality on the trail to the north.

Some weeks ago a scouting party left the Swift Current district to locate land for the settlers who have given up hope of making it "go" there. They reported finding many sections of desirable lands where settlers will have an even chance of making their homes and produce at least enough to sustain life without going on charity.

And That's That

He was awakened in the middle of the night by his nervous wife, who said: "I hear sounds as though someone is coming up the stairs."

"What's the time?" he asked sleepily.

"Two o'clock," replied the wife.

"It's all right," he said, turning over; "it'll be me."

She: The directions say to rub the surface down with steel wool. What on earth is steel wool?

He: I'm not sure, but I think it's made from the fleece of hydraulic rams.

WORLD HAPPENINGS BRIEFLY TOLD

If you are on relief in Calgary you mustn't keep a cow, unless you take a proportionate reduction in milk allowances. This is the ruling of the civic relief agency.

Nipissing Mining Company had a profit of $146,826 for the year 1933, compared with a loss of $181,437 for the previous year. The profit shown includes interest from investments.

Premier R. B. Bennett has accepted the rectorship of Queen's University. He succeeds Dr. O. D. Skelton, under-secretary of state for external affairs, who held the office for six years.

Hon. George H. Sedgewick, chairman of the tariff board, has left for England where he will visit a number of manufacturing plants which are interested in applications pending before the tariff board.

Alan Cuthbert Burns, well-known in the British West Indies, has been appointed governor of British Honduras in succession to Sir Harold Kittermaster, recently appointed governor of Nyasaland.

Pleased with the success of the Mother's Day postage stamp depicting Whistler's Mother, U. S. Postmaster General Farley said he was ready to try a Santa Claus stamp to commemorate Christmas.

Dr Louis Martin, one of the world's foremost authorities on contagious diseases, was named head of the Pasteur Institute. For 40 years Dr. Martin has been associated with the Institute.

Creating a legal unit to which Manitoba can turn over the 1,500 acres donated from the Turtle Mountain reserve, the International Peace Gardens, incorporated, was granted a license to do business in the province.

Fires in Alberta in 1933 took toll of 30 lives compared with nine in 1932, according to the report of Fire Commissioner Henry Brace. There were 1,832 fires during the year with property loss of $1,435,612 compared with loss of $2,495,491 from 1,937 fires in 1932.

May Ship Via Panama Canal

Route Being Investigated By B.C. Livestock Interests

The proposal by British Columbia livestock interests that beef cattle might profitably be shipped to European or British markets is again being investigated. A proposal has been advanced that B.C. cattle could be shipped alive through the Panama Canal from Vancouver and the feasibility of this is under consideration.

Statistics reveal that the move would not be so much a means of finding an outlet for any excess production, since B.C. already imports more than half as much beef as it produces, but would merely serve as an avenue for bolstering the price, if it were feasible. Stockmen claim that Alberta beef depresses their prices to such an extent that the industry becomes unprofitable for the B.C. producers. By shipping to the British market, according to the argument advanced, B.C. cattlemen could get a better price for their beef than they can on the home market, even with rates included.

Dr. W. R. Gunn, livestock commissioner, and J. A. Grant, marketing commissioner have been discussing the matter with livestock men during their recent visit to Williams Lake.

Rich Radium Find

Biggest Pitchblende Strike Yet Uncovered In The North

Radium ore beds at Hottah lake, 100 miles south of Cameron bay, N.W.T., are even richer than first reports of prospecting parties stated, Edward Harlreaves, Toronto mining man and managing-director of Great Bear development, revealed recently.

"It is the biggest pitchblende strike ever to be found in this country or the United States," he continued. He displayed a sack of sample ore. He declared that in his company's field they have a ton of ore sacked and ready for shipment. It was taken out only with sledge hammers.

He declared that the ore is worth $6,000 or $7,000 a ton, and will be shipped to an eastern refinery. He declared that silver is not showing yet in the new area, as at Great Bear lake.

Children and flowers thrive best with plenty of sun and air.

Canada expends $135,000,000 annually to keep her schools going.

Agricultural Notes

Many Items Of Interest To The Western Farmer

The first asparagus shipments this year from the Niagara district of Canada were made on May 7.

The largest crop of tree fruits in history is expected this year in the Okanagan Valley, B.C.

The first British Columbia strawberries on sale this year at Calgary, Alberta, on May 2 were exactly one month earlier than last year.

Canadian cattle sailings to Great Britain this year up to May 10 totalled 15,594 head, as against 13,246 for the same period of last year.

For the first 19 weeks of this year, up to May 10, 1,224,582 hogs were graded in Canada, as against 1,220,766 for the same period of last year, an increase of 3,816.

Timothy is grown in England as a permanent mixture but it is not saved fo any extent as a seed crop. The United States generally supplies the greatest proportion of this seed.

Canadian alsike is regarded in Britain as the best available, and, since the United Kingdom harvests very little of this seed as a crop, the bulk of the requirements are drawn from Canada.

Toronto lambs made the high mark of the year under a moderate run for the week ending May 10, when Western food-lot lambs topped $9.50 per cwt. Spring lambs had a top of $9. —Livestock Market Report, Dominion Department of Agriculture.

The reports of crop correspondents throughout Canada at the end of April indicated that prospects for the 1934 crops were below average, the most unfavourable conditions being reported from Ontario, Manitoba, and Saskatchewan.

Twenty-one large boxes of British-grown chrysanthemums were carried to Montreal in the C.P. liner Duchess of Atbol, and forwarded by rail to British Columbia. The plants were rooted and grown in specially prepared soil, and were tended every day during the entire journey by sea and land.

Winter-killing of fall wheat in Ontario was particularly severe, the per centage (39) being the highest of any year on record except the disastrous winter 1917-18, when it was 56. Of the 631,000 acres of fall wheat seeded in Ontario last autumn, it is estimated that 246,000 (or 39 per cent.) acres are winter-killed.

The contemplated reduction in spring wheat acreage in Canada this year is divided among the three Prairie Provinces—1,000,000 acres in Manitoba (4 per cent.); 1,622,000 acres in Saskatchewan (11 per cent.) and 395,000 acres in Alberta (5 per cent.). The other provinces, where spring wheat is almost negligible, show little change.

There is a smaller carryover of hay this spring than there has been for many years, owing to the strong demand caused by the past long severe winter. It follows, says the Dominion Seed Branch report for April on hay marketing, that the market hay crop for 1934 will need be larger than usual so as to meet the requirements of next winter.

Winter injury to fall rye in Canada was most severe in Ontario and Saskatchewan. In Ontario 45,500 or 29 per cent., of the 56,300 acres sown to fall rye were winter-killed, leaving 40,000 acres for harvest. In Saskatchewan 38,000 or 16 per cent. of the 240,000 acres sown, were winter-killed, leaving 202,000 acres to be harvested. For all Canada, 422,100 acres were sown to fall rye, and 15 per cent., or 61,900 acres, is estimated as winter-killed.

Glass "Windows" For Engine

Motorists Can See As Well As Hear Knocks

Nearly every motorist has at one time or another heard "knocks" in his engine; now these disturbing noises may be seen.

Engineers at Massachusetts Institute of Technology have placed glass windows in an automobile engine and visitors to the 11th annual open house at the Cambridge institution on May 5 saw as well as heard those harsh sounds denoting internal trouble in gasoline engines.

A Women's Who's Who

With an array of over 6,000 sketches of English women, Hutchinson & Co., the London publishers, will soon launch a "Women's Who's Who". The list has taken two years to prepare and contains the names of 150 women air pilots, 3,500 women doctors, 300 women justices of the peace, 800 women county councillors, 84 women architects, and dozens of solicitors, estate managers, housing pioneers and members of parliament.

Winnipeg Newspaper Union

By Ruth Rogers

COTTON BLOUSES ARE SMART, COOL FOR SUMMER, PATTERN PROVIDES FOR BOTH STYLES

Don't miss this opportunity to order today's pattern. It provides for both styles illustrated. The high neck blouse with short raglan sleeves gathered into wrist bands, is alluringly feminine.

You can fashion it of sheer cotton crepe prints, organdie novelties, cotton net, handkerchief-finish lawn prints, pastel tub silks, etc.

The V-shape neck blouse with that windblown bow is decidedly young. Any of the cotton prints as checked or striped seersucker, plaided gingham, pique, lawn, sateen are attractive for it. Tub silks and linen are also lovely.

Style No. 843 is designed for sizes 14, 16, 18 years, 36, 38 and 40 inches bust. Size 16 requires 2¼ yards of 39-inch material for View A; View B requires 1⅝ yards of 39-inch material.

Price of pattern 20 cents in stamps or coin (coin is preferred). Wrap coin carefully.

In Germany, bats are called "fledermause," meaning "flying mice."

Little Journeys In Science

MOLECULES

(By Gordon H. Guest, M.A.)

Scientists believe that all matter is composed of very small particles called molecules. These molecules are invisible and cannot be observed even with the aid of the most powerful microscope. It has been calculated that it would require about forty million molecules, touching one another, to make a row one inch long. Again it has been computed that a small thimbleful of air contains about twenty-seven billion billion molecules. There are spaces between the molecules which are supposed to be much larger than the molecules themselves. These spaces between the molecules are known as the inter-molecular spaces.

Molecules are constantly in motion and they are also elastic. The hydrogen molecule, for example, has an average speed of over a mile a second and bumps against its neighbors about ten billion times per second under ordinary conditions.

In the case of gases the molecules are quite separate and distinct and have great freedom of movement. The particles of a gas appear to be perfectly elastic, and as a result their motion is slowed up when they collide with one another or when they bombard the sides of the enclosing vessel. The pressure of a gas upon the vessel is due to the hail-storm of molecules upon its walls. A definite quantity of a gas left in an open vessel is capable of indefinite expansion. Gases are therefore very compressible. A good illustration of this fact is that when a quart of water is evaporated it yields about seventeen hundred quarts of steam, measured under the normal pressure of the air and at the boiling point of water. This shows us why a strong vessel is required to hold steam at high pressure.

A liquid is more compact than a gas: that is, its molecules are closer to one another, and therefore have less freedom of movement. When a liquid evaporates some of the molecules escape into the air. The speed of a molecule depends upon its temperature and hence the warmer molecules of a liquid are lost first. This migration of the warmer molecules from a liquid results in a fall in temperature when a liquid evaporates. It is well known that water is cooled in certain countries by placing it in porous vessels in order to promote evaporation.

Solids, like liquids, are much more compact than gases. The molecules of solids are much restricted in their movements, and appear to vibrate or rotate about fixed centres of rest.

Electricity Helps Farmers

Greater Use In Scotland—Is Making Life Easier

Farmers of Scotland are using electricity to speed growth and make life easier. Nearly 400 are employing it for milking and in butter making. Market gardeners have recently found that they can accelerate the growth of vegetables by starting them in a hot-bed warmed by electricity. The "magical current" is just being introduced into hen houses, lights early in the evening and morning, deluding the biddies into believing the day is longer and thus causing them to lay more eggs. Ultra-violet rays produced from a lamp is being used extensively in the rearing of chicks.

Legacy, a new, promising variety of oats, produced by the Cereal Division, Dominion Department of Agriculture, from a cross between Banner and Eighty Day has done particularly well in Northern Saskatchewan, Central and Northern Alberta, and in the Eastern Townships of Quebec.

Hamelin To Celebrate

Will Commemorate 680th Anniversary Of Pied Piper's Visit

All living "children and children's children" of the ancient town of Hamelin, Germany, received invitations to return for a grand homecoming which started May 20 and running for the summer to commemorate the 680th anniversary of the strange Pied Piper of Hamelin.

They will retell the sad fate that befell all of Hamelin's youngsters when they were led off by a spiteful musician "clad in a garb of bright colors" and were swallowed up by the earth to the tune of his weird pipings. Only a little cripple who, according to legend, couldn't keep up with the merry crowd, lived to tell the tale, which Robert Browning put in English verse.

It was on June 26, 1284, the story goes, that a piper cast a fatal spell over the children, all because the town fathers bickered and refused to pay him his just due for ridding the town of a plague of rats.

The legend is traced back by some authorities to the children's crusade of 1211, by others to a wholesale abduction.

Recipes For This Week

(By Betty Barclay)

BRAN BRITTLE

2 cups granulated sugar
1 cup brown sugar
½ cup light corn syrup
1 cup water
¼ cup butter
½ teaspoon salt
1½ cups bran

Put the sugars, corn syrup and water into a saucepan and cook, stirring until sugar is dissolved. Continue cooking without stirring, until 300 degrees F. is reached. (Cold water test, very brittle).

Remove from fire, add butter and salt and stir only enough to mix well. Add bran and turn at once on a greased slab or on a greased inverted pan or baking sheet. Smooth out with a spatula. After about a half minute take hold of the edges of the candy and, lifting it slightly from the slab, pull it as thin as possible. Break into irregular pieces. Provides 1½ pounds.

SALAD AMBROSIA

(Serves 6)

2 cups orange pieces
1 cup halved strawberries (or diced pineapple)
1 cup diced peaches
Lettuce
½ cup mayonnaise
1 egg white
2 tablespoons sugar
½ cup shredded cocoanut
Powdered sugar

Combine fruit and arrange on lettuce-covered salad plates. Serve with yellow and white dressing of mayonnaise into which meringue of stiffly beaten egg white and 2 tablespoons sugar has been folded. Spread dressing over salad and sprinkle lightly with cocoanut and powdered sugar. Serve at once.

Ninety-five patches were required to repair damage inflicted to wings of an aeroplane caught in a hail-storm in South Dakota.

Cotton production in Egypt this year is expected to be double that of 1933.

Hot cranberry sauce is good on waffles.

Island Colony Of Lepers

Everyone Works At Something And People Not Unhappy

A certain amount of happiness in primitive and isolated surroundings falls to the lot of the 200 members of the leper colony of Orafara on the South Sea islands of Tahiti, according to a mission from the French government. The mission was headed by Dr. Jacques Le Mee, a prominent specialist, who was assisted by two other French physicians.

The Orafara colony is set in a clearing of deep underbrush at the water's edge and is a remarkable combination of beauty and simplicity. Except for two nurses sent out by the hospital in Tahiti to attend the diseased for a period of four years, all persons in the colony are lepers.

The colony is under a self-government scheme. By popular vote a mayor and his assistant are elected annually. Every new arrival is allotted a plot of land on which he may build his bungalow. There are both a Catholic and a Protestant church, and Dr. Le Mee declared that a sermon delivered by the local leper preacher was one of the most moving he had ever heard.

An unusual feature of the Orafara colony is the fact that the stricken inhabitants intermarry. The children, who are scarcely ever afflicted with the disease of their parents, are immediately taken away from the colony and either adopted or sent to an orphanage.

Everyone works at something, and a great part of the leper's life is spent fishing in boats made by the group. The enjoyment of freedom and the solitude of the sea tends to make these pathetic people less unhappy.

In the afflicted colony there are no petty jealousies or squabbles, according to Dr. Le Mee. All the inhabitants, except for the two nurses, are in the same condition and seem to strive to make the lives of the others pleasant, bearing the ravages of their disease with the greatest fortitude.

The French physicians left Tahiti with the firm conviction that leprosy is not contagious, but is contracted from some impurity of the soil, thus being more prevalent in warm climates, where the natives seldom use footwear.

OCCASIONAL WIFE

By

EDNA ROBB WEBSTER

Author of "Joretta", "Lipstick Girl" Etc.

SYNOPSIS

Camilla, Hoyt and Peter Anson, young and in love, marry secretly, deciding to live their own lives apart until Peter is able to provide for her. Peter is a young, struggling sculptor trying to win a competition for a scholarship abroad and Camilla is the adopted daughter of a wealthy family. She is not to inherit money when she comes of age and so is studying commercial art in the hope of landing an agency job. Others in the story are Avis Werth, another wealthy girl who is trying to win Peter, Sylvia Todd, Peter's model, and Gus Matson, his former roommate with whom he has quarrelled. After a party at an exclusive club, when the rest of the members of the party go a-a cabaret to continue the gaiety, Peter and Camilla slip off to the beach by themselves and fall asleep on the sand. When they awake it is early morning and Avis and another boy are standing near them. This makes it necessary for Camilla to announce before the party that she and Peter are married. Camilla urges Peter to accept some of her earnings to help him along, but Peter refuses and they quarrel. After Camilla has gone from the studio, Avis Werth calls and persuades Peter to accept a loan of $1,000. Peter and Camilla are reconciled. Avis invites them to a party, at which she introduces Peter to well-known artists and public men.

(Now Go On With The Story)

CHAPTER XLV.

"You may as well wish Peter a bon voyage now," Avis advised Camilla with bright optimism. "The three were in his studio viewing the finished product of his efforts.

"Wait a minute," Peter demanded. "I haven't entered the exhibit yet, even." But his own exuberant spirits betrayed his secret hope.

The bronzed figure, poised on its oval plinth, would be entered in the national exhibit on the following day. Camilla's heart swelled with pride and ached with a wistful anxiety. Peter's sudden change of attitude toward his work, and his spirit of optimism during the past fortnight, both puzzled and delighted her.

Previously, he had wavered between contrasting moods of hope and despair, ambition and lassitude. Money had been his difficulty and the reason for his despondency. But he had maintained a cheerful attitude ever since that day of their first quarrel, which had concerned their finances. Perhaps his chagrin over it had transformed him permanently, Camilla thought. Yet she scarcely believed it, and wondered just what had happened. Perhaps the imminence of the exhibit awards sustained him. If that were the explanation, she anticipated with dread the depth of his disappointment if he lost.

"And she is still a lady without a name," Peter observed. "The committee will have to decide the title here and now. Any new ideas floating around between you two girls?"

They looked at each other, each reluctant to speak first. Finally, Avis asked sweetly, "What was that suggestion you made the other night, Camilla?" As if it had been of too little consequence to remember.

"I don't think I can offer anything better than 'Eager Youth'. But Peter must have thought of something better during these weeks while he has worked on it."

"Fact is, I hadn't thought much about it until Avis brought up the subject several weeks ago. I thought her idea was pretty good, and still do. 'Inspiration'," he repeated thoughtfully. "She does look rather inspiring, at that," he grinned.

"Which of us—the figure or I?"

"Both of you," he bantered.

"Oh, I have a marvelous idea," Avis declared suddenly. She was giving a party for Peter that evening to celebrate the completion of his work. All her plans, so far, had worked as smoothly and satisfactorily as well-oiled machinery, and her confidence was mounting rapidly. She was even venturing a little ahead of her plans, so sure was she of her victory.

"Why not have a christening and unveiling of the statue to begin the party tonight? Everyone will want to see it, so we'll all come in here for a nice little ceremony and then adjourn to celebrate with whoopee. I'll get a thin white cloth to drape over it and—oh, may I, Peter—be the mistress of ceremonies, name the statue and unveil it?" Her manner conveyed that she asked no more humble honor.

"Why not?" Peter inquired. What else could he say? "It's your idea. Go ahead with it."

"Then you will use my title?" hesitantly.

"Sure. It's all right. Any good sculpture is inspiring; and if it isn't that good, the name doesn't matter, anyway."

Avis fluttered across the room. "You're a dear to let me do this, Peter. Well, I'll have to run home and get busy. I've several things to do for tonight. You carve the name on right away, so everything will be ready. I'll bring the veil over later." Avis did everything energetically, by leaps and hunches, as if she were rushed for time doing important things; while she actually accomplished very little except the satisfaction of her own selfish desires.

"She's a pretty good scout," Peter observed indulgently, when she had gone. "What do you think, money—is the name all right?"

"What's the difference what I think?" she asked quietly.

"Plenty!" he looked at her in surprise. "Didn't I consult you about the name, too?"

Camilla smiled bravely. "But you gave mine no consideration."

"Sure, I did. Fact is, I don't know much about it. I just want to use whatever is best, regardless of whose it is. So you don't like 'Inspiration'?"

"It means nothing. As you just said, it could be applied to any piece of sculpture. I don't see that 'Eager Youth' is the best possibility, but at least it applies to the figure, and means something. A young girl standing on tip-toe and drinking eagerly from the fountain of life which she holds to her lips in the form of a fluted shell. Doesn't that describe it, exactly? There is some imagination in it, anyway. I suppose hundreds of figures and groups have been named 'Inspiration'."

"Yeah, maybe thousands," he conceded coolly. "Well, it done, I can't offend her now. She's been mighty decent to me in a lot of ways."

Camilla held tightly to her words and emotions until she could escape. "Then, it's all settled," she said lightly, moving toward the door. "I'll have to run home and dress now for the party. See you later, dearest," and kissed him goodbye.

Alone, she thought bitterly, how treacherous love was. It took you to the heights of happiness only to dash you down mercilessly and fiendishly to the bottomless pit of anguish. She just couldn't understand Peter these days.

Was it Avis who had so changed him? True, he had been sweet enough to her whenever she saw him, but his attentions had been more dutiful than spontaneous, his love more perfunctory. She may have imagined that in her resentment toward Avis, however. This matter of naming his statue had hurt her immeasurably. Peter's work was such an intimate part of their love together and their future. It should represent as much as possible their combined interests.

It seemed to her that since Peter had not named his own work, he should have been delighted to give her that privilege and honor. Of course, had Avis' suggestion been superior to her own, she would have been glad to favor it. As it was—well, there was just a heavy weight of sadness in her heart as she prepared for the evening. She recalled with a little wry smile what Peter had said about Avis being mighty decent to him in a lot of ways.

How like a man! to give credit in full measure, pressed down and running over, to some woman whose attentions were an inexcusable intrusion, and to dismiss lightly the sacrifices and generous considerations of the woman who loved him.

The thought suddenly mocked her that if Peter were so susceptible to feminine influences right here in the same city with her, what would happen to him for a whole year in Paris without her? But she dismissed that thought as instantly as it occurred to her. She did not doubt for a moment that Peter was loyal and true. His work abroad, if he had the chance to go, would absorb all his time and thought; and their life together after that would by a joyous eternity.

Her mind leaped ahead to plan for the days just before her. If Peter should go away, they would have to crowd all the happiness they could find together into the two intervening weeks. There would be a week of anxious suspense awaiting announcement of the prize winner. It would be a difficult time for Peter. She doubted if he could work at all—and he shouldn't. He needed a complete rest after these strenuous weeks of work and anxiety.

For the moment, she regretted her confinement to her own work, but resolved to give Peter every possible moment which she could spare from it. Perhaps she could persuade him to come to the apartment with her for a week, and Rose would generously go back to her mother's for the time.

Her own work was well established now, her copy up-to-date and planned ahead. It promised success, but only time would prove that. Already, her Tiny Tots actually were smiling up at her from the pages of numerous magazines, waving gleefully at her from signboards along the highway, peering down from store shelves where they cavorted on the boxes of cereal which they exploited—just as she had dreamed they would be doing when she had created them on that memorable night two months before.

She was proud of her achievement, whatever the outcome might be, but she kept to herself the fact that she was the originator of the Tiny Tots who had recently sprung up everywhere to claim attention. Only Peter shared her secret, and not even he knew how important the work was which her sister did for the advertising agency.

New Aid For Aviators

After five years of research, Leo O. Delsasso, associate on physics at the University of California, has produced an acoustic altimeter that "hears" the earth and warns whether a ship of the air is approaching too rapidly toward a possible crash. The apparatus also informs the pilot the number of feet he is distant from looming disaster.

A woman may get a dress for a ridiculous price, but never for an absurd figure.

Either borax or photographers "hypo" furnishes a mild bleach for white silks or woolens.

A poet says he can keep dozens of verses in his head. The trouble is that he doesn't.

Inexpensive—all druggists.

Tribute To King George

Empire Fortunate In Having Wise Man For Sovereign

It is 24 years since King George ascended the throne of his illustrious ancestors, and thus Their Majesties are entering upon their silver jubilee year. It is to be marked, at its end, by Empire-wide ceremonies in keeping with so important an anniversary in our widespread affairs.

For many reasons the people of the Empire will rejoice with their King and Queen in this anniversary year. There is much reason for congratulation in the fact that in the extraordinary events since 1910 the Sovereign was a man so wise, so adaptable, so much opposed to sham and pretence, so thoroughly a man of the people. When we consider for a moment the catastrophes which would have been inevitable, the misery of millions, if the King in these decades had been another sort of King, we realize something of what the Empire has been saved by the shrewed, simple, kindly, dignified family at Buckingham Palace.—Ottawa Journal.

Summer Styles For Engines

Canadian National Has Put New Models Into Service

Some of the latest modes in summer styles for locomotives recently steamed out of the motive power shops of the Canadian National Railways. To the practised eye of an admirer of mechanical beauty they were the "last word" in up-to-date equipment, having the latest wrinkles which they carry are feed-water heaters, by which water is pre-heated before being fed into the boilers; track sprinklers to lay the dust ahead of passenger cars; and smoke deflectors to keep smoke from blowing backward into the eyes of the crews and passengers. The work has been underway during the winter months in the various motive power shops of the National system and, in all, more than 200 locomotives have been equipped with these, and other, modern appliances. All have been put in active service, in readiness for the tourist season to commence.

THE RHYMING OPTIMIST

By Aline Michaelis

A MOTHER

How can a mother ever find
Through toil-filled days, through hours of stress,
So many moods of tenderness?

Life, sometimes, is a lonely thing,
Bare of beauty and drained of dreams;
How can a mother always bring
Shining hope back and faith's white gleams?

Wild regrets like grim ghosts will rise,
Threatening all of the years ahead;
Who but a mother can check vain sighs
And show how futile are tears we shed?

Failure and folly may trouble each breast;
How can a mother's clear eyes see
All of the virtues it once possessed
Bloom in the heart, as it used to be?

Sounds Almost Impossible

Professor Auguste Piccard Foresees Fast Stratosphere 'Plane Trips

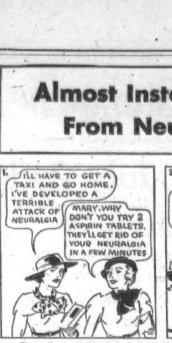
Nancy, France, hears Prof. Auguste Piccard declare stratosphere 'plane trips between Paris and New York in eight hours are almost at hand. With a tightly closed cabin and an air compressor for the motor, the trip will be made in fogless, stormless atmosphere 20 miles up. This original stratospherian is already establishing an interplanetary trips. Perhaps a man-carrying rocket can be propelled by distintegration of matter. A round trip to Mercury might require disintegration of 110 pounds of hydrogen, sounds fanciful, but Professor Piccard is taking the first practical steps—he's thinking it.—Christian Science Monitor.

Use Of Wood For Heating Purposes

In spite of the preference for coal and other fuels for heating purposes, a large amount of wood is still so used. The quantity used in normal years is estimated by the Forest Service, Department of the Interior, at 913 million cubic feet, or 9,611,223 cords. Fuel-wood formed about 30 per cent. of the total amount of wood cut in the Dominion for all purposes. During the past two or three years there has been a large increase in the amount of wood used for fuel.

Each day the kingfisher eats seven times its own weight.

Almost Instant Relief From Neuralgia



For Quick Relief Say ASPIRIN *When You Buy*

Now comes *amazingly quick* relief from headaches, rheumatism, neuritis, neuralgia . . . the *fastest safe relief, it is said, yet discovered.*

Those results are due to a scientific discovery by which an Aspirin Tablet begins to dissolve, or disintegrate, in the amazing space of two seconds after touching moisture. And hence to start "taking hold" of pain a few minutes after taking.

The illustration of the glass, here, tells the story. An Aspirin Tablet starts to disintegrate almost instantly you swallow it. *And thus is ready to go to work almost instantly.*

When you buy, though, be on guard against substitutes. To be sure you get ASPIRIN'S *quick relief*, be sure the name Bayer in the form of a cross is on every tablet of Aspirin.

WHY ASPIRIN WORKS SO FAST

Drop an Aspirin Tablet in a glass of water. Note that BEFORE it touches bottom, it has started to disintegrate.

What it does in this glass it does in your stomach. Hence its fast action.

A Super-Highway

U.S. Government Receives Plans For Coast To Coast Route

An engineer's idea of the "superhighway" of the future was envisioned by the Pittsburg chamber of commerce as it submitted plans with the federal public works administration for such a transcontinental route.

Advocates estimate the approximate cost of the 3,000-mile roadway between $300,000,000 and $400,000,000, which would be borne by the government. Tolls and other mileage charges would make the project self-liquidating and self-sustaining.

Congested cities in its cross-country stretch would be eliminated as the proposed high-speed, non-stop thoroughfare would have no intersecting lanes, but ingress and egress by ramps only, and would be 90 feet wide with different lanes for varied speeds.

States traversed under the preliminary plan would be New York, New Jersey, Pennsylvania, Ohio, Indiana, Illinois, Missouri, or Nebraska, Colorado or Wyoming, Utah, Nevada and California.

In their resolution favoring the project, chamber directors stated it would provide a needed main artery for transcontinental traffic and furnish employment.

Battle With Lion

French Soldier Is Badly Mauled For His Heroism

A soldier who tried to play Samson with a runaway circus lion was badly scratched and mauled for his heroism. The lion, bored with life in a menagerie on the outskirts of Paris, pulled up the planks in the bottom of his cage and headed for the bright lights.

The soldier cornered the lion in an angle in a old fortification. The lion took a swipe at him. He kicked the lion.

Thereupon, the king of beasts bit the soldier in the shoulder and clawed him about the head. Then the lion's trainer arrived and got the fugitive into a portable cage.

Most British City

With 80.1 per cent. of the total population of British origin, Moose Jaw has laid claim to the honor of being the most British city in the three prairie provinces. Calgary ranks second with 78.1 per cent. and Brandon, in Manitoba, third, with 73.5 per cent.

Horses Run Quickly

According to statistics, a horse runs three times as fast as a human being; the records show that in running one mile a man requires four minutes and 10 seconds, while a horse does it in only one minute and 30 seconds.

Memorandum—A little note you write on a pad to make yourself wonder next day what you meant by it.

In Pennsylvania, a man has the privilege of marrying his grandmother.

The world's most powerful lighthouse is located at Cape St. Vincent, Portugal.

Little Helps For This Week

"I have finished the work which Thou gavest me to do." John 17:4.

He who God's will has borne and done,
And His own restless longings stilled;
What else he does or has forgone,
His mission he has well fulfilled.

Cheered by the presence of God I will do at each moment without anxiety and according to the strength He has given me, the work that His Providence assigns me. I will leave the rest without concern, it is not my affair. I ought to consider the duty to which I am called each day as the work God has given me to do, and to apply myself to it in a manner worthy of His glory, that is to say, with exactness and in peace. I must neglect nothing.—Fenelon.

It is thy duty oftentimes to do what thou wouldst not, thy duty too to leave undone what thou wouldst do.—Thomas A. Kempis.

"Dad"

A Napoleon Museum

French Mission Dedicates House With Relics In Saint Helena

Longwood, the house in Saint Helena in which Napoleon died in 1821, has been inaugurated by a small French mission as a Napoleon museum. Housing the original fittings and many relics of the Emperor, the museum will be kept up by the French government, although very few tourists ever reach this island far off the steamship lanes.

In a simple ceremony, the tri-color was run up beside the Union Jack, and in the presence of the British colonial officials, Commandant Marcel, of the French African infantry, formally inaugurated the museum.

Many of the relics which it now contains are the gift of Alfred Day Pardee, of New York, and his wife, who possess the greatest private collection of Napoleon souvenirs in existence.

An Original Idea

Australian Has Plan To Make "Going Broke" Easier

Proposing a new plan for making "between-pay-days" easier, a man recently placed the following advertisement in a Melbourne, Australia, newspaper: "Gentleman who gets paid on Thursday and who is usually broke by Saturday will exchange small loans with a person who is paid on Saturday and is not broke until Thursday. References asked for and given."

YOUR LIVER'S MAKING YOU FEEL OUT OF SORTS

Wake up your Liver Bile
—No Calomel needed

When you feel blue, depressed, sour to the world, that's your liver which isn't pouring its daily two pounds of liquid bile into your bowels.

Digestion and elimination are being slowed up, food is accumulating and decaying inside you and making you feel wretched.

More bowel-movers like salts, oil, mineral water, laxative candy or chewing gum, or roughage, don't go far enough.

You need a liver stimulant. Carter's Little Liver Pills is the best one. Safe. Purely vegetable. Sure. Ask for them by name. Refuse substitutes. 65c. at all druggists. 65
